

# System Hardware Analysis, Design, and Implementation

Our team will help you create and implement a plan for all systems in your office, showing you the most effective upgrades available for the hardware and software you use and ensuring that you have a reliable infrastructure. We understand your computing needs and work directly with the software and hardware vendors that are specific to the demands of governmental agencies.

➤ **Utilizing Reputable Software Applications**

- Microsoft Operating Systems
- Windows Server
- SQL Server

We understand the goals and the specific needs of local government agencies; from Electronic Public Records to Disclosures.

➤ **Partnering with Reputable Equipment Manufacturers**

- Equus Computer Systems
  - With Equus we are able to provide you with the components you need, not the standard components available through Tier 1 Manufacturers (IBM, HP, Acer)
  - Set minimum standards like 3 year manufacturers component warranties.
- Printing
  - Xerox
  - HP
  - Okidata
- Firewalls (Wired and Wireless)
  - SonicWall
  - Cisco
  - Netgear
  - DLink

➤ **Installation and Disposition of Hardware**

- We understand the complexities of your software requirements, thus we can recommend and implement the most optimum solutions.
- Standardize the desktops keeping the learning curves to minimums and productivity maximized.

We specialize in identical system setup between offices along with replicating the desktop environments of pre-existing equipment. We will have your new and existing infrastructure ready to go quickly, limiting your employee's loss of productivity.
